

## Welcome to FinWiz™ Corporate Finance

*The new control and future command tool of your corporate finance*

### ***Have you ever looked***

At the marvelous instruments that your colleagues in product design and engineering use every day? With their CAD/CAM systems, they can create the most fascinating things right there on their computer screens. Shapes, sizes, colors, perspectives, details, variations, contexts – it is all there, at their fingertips, in an instant. Or the cockpit of an airplane?

### **What do you have a financial manager?**

Well, of course, you have computer programs, too. You have Excel and other programs. You have all kinds of accounting programs. After all, computers started out as more or less advanced calculators.

### ***And now you can take a big step up***

To FinWiz™. It will take you as close to the CAD/CAM experience as you can get in the world of financials.

### ***With FinWiz™***

You can look at your company's finances from all angles and in all dimensions and perspectives, just as the engineers can look at their objects. And you make those changes instantly. FinWiz™ is more than a financial wizard – it is a total financial management and planning tool.

### ***You feed in the basis facts***

Such as general accounting data, facts about company structure, organization and salaries, revenues, overhead costs, investments, incoming balance sheet year 1, and other basis data.

### ***With that input,***

You can have FinWiz™ do all kinds of advanced budgeting and calculation wizardry. You can e.g.

- change any variables, and FinWiz™ calculates the consequences
- make rough estimates or detailed calculations

- analyze three years back and make prognoses for five years ahead

***You can create, in an instant, and with any number of variations:***

- profit and loss budgets
- balance sheet budgets
- liquidity budgets
- cash flow estimates
- financing alternatives
- key figures
- valuations
- investment calculations
- probability estimates

***Produce your data***

For presentation in any form you need it, as tables, charts, graphs or text.

***FinWiz™ helps***

- controllers and CFOs get a firm grip over the budgeting process, evaluate the financial consequences of various strategic alternatives, prepare and follow up mergers and acquisitions.
- auditors verify historic or future data
- venture capitalists make financial calculations of companies they are interested in, and review variations and alternatives
- bankruptcy administrators evaluate survival chances after various alternative reconstruction models
- investment bankers make calculations of any number of future alternatives

After every modification of parameters you can take a step back and ask for a valuation, after the time span you choose.

***You can go beyond “truth and consequences”***

Into the world of “assumptions and consequences”.

***FinWiz™ is an unusual wizard:***

Not only does it pull out the rabbit of the kind and color you want from the hat. It also measures, weighs and evaluates it – to precision levels you specify!

***FinWiz™ builds on***

A program most accountants, auditors and financial officers are familiar with, Excel 4 or higher. That makes it easy to install FinWiz™ and start using it with very little running-in time.

***FinWiz™ is a product of***

RealBiz International AB, a company that specializes in advanced computer-supporter systems for business analysis. For further information about FinWiz™ and other analysis systems, please turn to
